

# Waste Scraper Systems – WSS

Solid waste handling

**Ecraft's Waste Scraper Systems are heavy duty and have high capacity. They are specially designed for onion waste; such as loose skins, dust and whole onions.**

Through the U-shaped trough, two strong rubber teathed belts pull the waste scrapers. The bottom of the trough is lined with high wear resistant plastic sheets which can withstand many years of trouble free operation.

Our elevated open bottom waste scraper allows the even distribution of waste in containers and trailers. After elevation, the waste will drop through the open bottom into container or trailer. The pile will be distributed evenly while building up.

## Waste Scraper Systems – WSS

Capacity	Customer / installation specific
Energy requirements	# Kw 3 phase, neutral, ground, depending on model, length and incline parts
Compatibility	Needs to be electrically connected to a control panel   Integratable in total installations
Options	<ul style="list-style-type: none"><li>• Parallel running check system</li><li>• Custom length</li><li>• Incline elevator</li><li>• Gooseneck end</li><li>• Open bottom container filling system</li><li>• Container full alarm system</li></ul>
