simplicity by intuition

Simplicity by intuition

Earth, wind, rain and sun. From our ancestors we've inherited an intuition to work with these elements to grow crops. Nowadays technique helps us further. You still rely on intuition when sowing, growing, protecting and harvesting. But what about storing?

Using a traditional storage computer can be challenging

If you've already worked with a conventional storage computer, you know how hard it can be to set up your storage. The process can be overwhelming and time-consuming, particularly if you don't possess all the technical knowledge. During storage, it is necessary you manually monitor progress and modify programs. You just want your products to stay in the right conditions. But because there are so many technical settings, you are never sure if you did it right.

ARE YOU READY
FOR THE **FUTURE?**

THE FUTURE OF STORAGE IS **NEXT...**

OmniCuro NEXT provides a complete set of storage strategies for each agricultural and fresh product.

Setup your storage strategy in minutes

Working with OmniCuro NEXT doesn't require any technical knowledge. You can quickly setup a strategy, even before you start harvesting or storing. Simply select the product you want to store. And set the desired conditions for temperature, relative humidity and CO₂ levels.

Peace of mind with OmniCuro NEXT in the lead

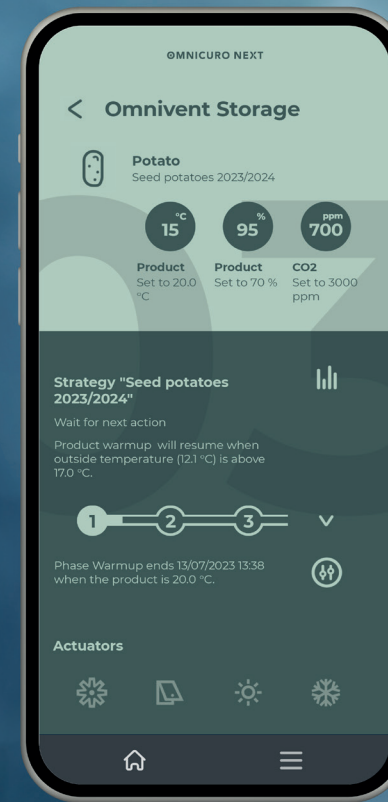

OmniCuro NEXT controls your entire storage system. From ventilation and cooling to heaters and hatches. It knows exactly what's happening inside and outside your storage. And it makes smart decisions to keep your products in the right conditions. Like opening the hatches when outside air is good for drying.

During the storage season, OmniCuro NEXT automatically moves your product to the next storage phase. No need to change the technical settings yourself. You can relax and take care of other business.

1 Most important: what are the product conditions?

2 What's happening in the current phase of storing?

3 Connected storage devices

● Serious error of product condition, storage strategy or device(s)

● Attention is needed for product condition, storage strategy or device(s)

● Good product conditions, storage runs as planned and devices are working

● Idle storage cell

Always understand what's going on

During storage, it's always good practice to use your own intuition. Regularly check your storage to see, feel, or smell how your products are doing.

Omnivent storage supports your intuition with 24/7 monitoring of your storage. Green, yellow, and red signals let you know if your products are okay or require attention. When Omnivent storage senses something important requires attention, you receive a notification. Not with technical details, but with a clear message about what's going on and what action you need to take.

Don't worry, store happy

While outside the elements of nature are in control, inside our storage system is in control. OmniCuro NEXT combined with our storage technology helps you keep your products in perfect condition. So you can concentrate on the job outside. And have one less thing to worry about.

Let's talk about what's next for your storage

Want to learn more about OmniCuro NEXT? Ask your local representative about availability in your region. Our storage specialists are happy to give you a personal demonstration of OmniCuro NEXT and discuss your storage needs.
