

NEW ROCKREPELLER™ IMPELLER

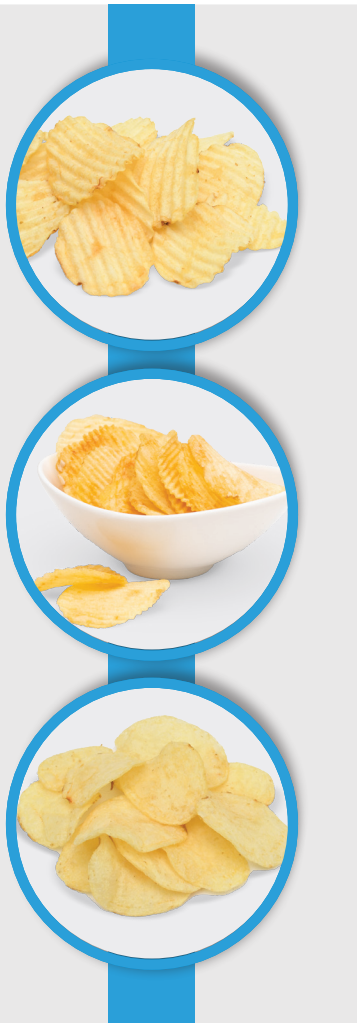

Saves Lost Production

CUTTING
SOLUTIONS

Exclusively designed by Urschel
to assist Urschel CC Slicer customers,
meet the new production-proven
RockRepeller™ Impeller.

® PATENT PENDING
ROCKREPELLER™

Production-proven Cost-savings

Rocks and stones in potato processing cause lost production time. Urschel cutting solutions now offer a patent-pending impeller to reduce potatoes and headaches.

Urschel customers implementing the new, patent-pending impeller have identified many benefits: less downtime, increased production, and increased line flow rates. In addition, customers have reported a reduction in parts with three times fewer knife holder and spare replacements; minimized damage to knife parts and cutting heads to promote overall increased cost-savings.

The impeller works with centrifugal force to filter out rocks. Impeller paddles move rocks out and away from the cutting zone to exit the machine.
